

EXTRA LONG DELIVERY FOR ERA Saving labour, materials, time and transport

When Energy Resources Australia (ERA) required 28 kilometres of 200 and 710mm poly pipe transported from Townsville to Darwin for their Ranger mine, Distribution Direct set about load planning to reduce the overall cost to their projects. Knowing that shorter lengths mean more pipe joins and manual labour, our team worked directly with their supplier Vinindex to maximise the lengths we could ship using our specialist fleet of road trains and extendable trailers. If ERA joined all that pipe together they could've saved over 920 joins! By transporting longer lengths ERA made significant labour, materials, project time and transportation savings.

28 KM

Poly pipe hauled
from Townsville to
Darwin

0.6 JOINS

Saved per 20mtr
length shipped

4X WATER
